

FOR IMMEDIATE RELEASE

House of the QR Code™ Introduces NovaBeam OS AURA Watch™

Wearable platform brings Create, Challenge, Verify, and Decide together in a coordinated four-role AURA system.

California - September 24, 2026 - House of the QR Code™ announces **NovaBeam OS AURA Watch™**, an intelligent wearable computing platform built around a coordinated four-role AURA system designed to create, challenge, verify, and decide.

Developed by **Co-founder Tyrone M. Sanders** with **Co-founder Nathan E. Sanders**, the watch combines conversational interaction, software creation, research, information tools, device control, storage, and interactive presentations in a wrist-worn platform.

AURA 101 - CREATE	Develops the initial idea, solution, design, research direction, or software project.
AURA 102 - CHALLENGE	Examines the work, identifies weaknesses, and searches for improvements.
AURA 104 - VERIFY	Checks the work for accuracy, consistency, and completeness.
AURA 105 - DECIDE	Brings the results together and produces the final direction.

Together, the four roles form AURA's central philosophy: **Create. Challenge. Verify. Decide.** The roles are designed to work as one coordinated system under human supervision rather than as unrelated agents.

Users can speak directly to AURA to ask questions, request research, compare ideas, create software, save information, control compatible devices, and launch presentations.

CodeCore can generate HTML and web applications, Arduino sketches, Python projects, and other software concepts from spoken requests. **Discovery Lab** supports structured exploration, analysis, material comparisons, mathematical ideas, and research questions. **Particle Discovery Mode** provides interactive educational exploration of atomic structure, particles, elements, and material concepts.

ProjectionCore extends AURA beyond the watch display by presenting swarm activity, discoveries, software projects, and interactive visual information on a larger display.

Additional capabilities include **AppForge**, **Travel Journal**, **LeisureCore**, **WeatherCore**, **EarthCore**, **TimeCore**, **SoundCore**, **RokuCore**, **BatteryCore**, **microSD storage**, **Wi-Fi connectivity**, **voice-driven operation**, and **automatic power management**.

"The idea behind AURA is that one system does not have to approach every problem from only one direction," said Tyrone M. Sanders. "One role creates, another challenges, another verifies, and another decides."

Sanders has also published **AURA: The One Who Is Four, and the Four Who Are One: Create. Challenge. Verify. Decide**, a book describing the concept behind the coordinated AURA system.

About House of the QR Code™

House of the QR Code™ develops experimental technology concepts combining software, connected devices, interactive interfaces, and emerging computing platforms.
